

The Legend of Riverfield

Boat Builders Shed

Please read the instructions before starting construction.

When opening the kit you will notice the smell of burned wood. This is because the parts are laser-cut, which literally means a very tight light beam burns through the material. You may also notice some soot at the cut edges. The amount of soot depends on the material used. You can considerably reduce it by gently wiping at least the bigger and easy to reach edges with a soft cloth or household tissue.

PVA or equivalent glue will be required to glue parts together. Give glue enough time to dry. Wipe away any excess glue immediately using a fine cloth or the tip of a toothpick. A sharp hobby knife is needed to remove parts from the sheet. Be careful and always cut away from your body. Fine sand paper may be useful to clean these areas or any tight fitting joints. Clamps, pegs and elastic bands may help during the construction of the kit. Make sure that the parts are aligned correctly before applying any of these tools.

General pre-assembly preparations

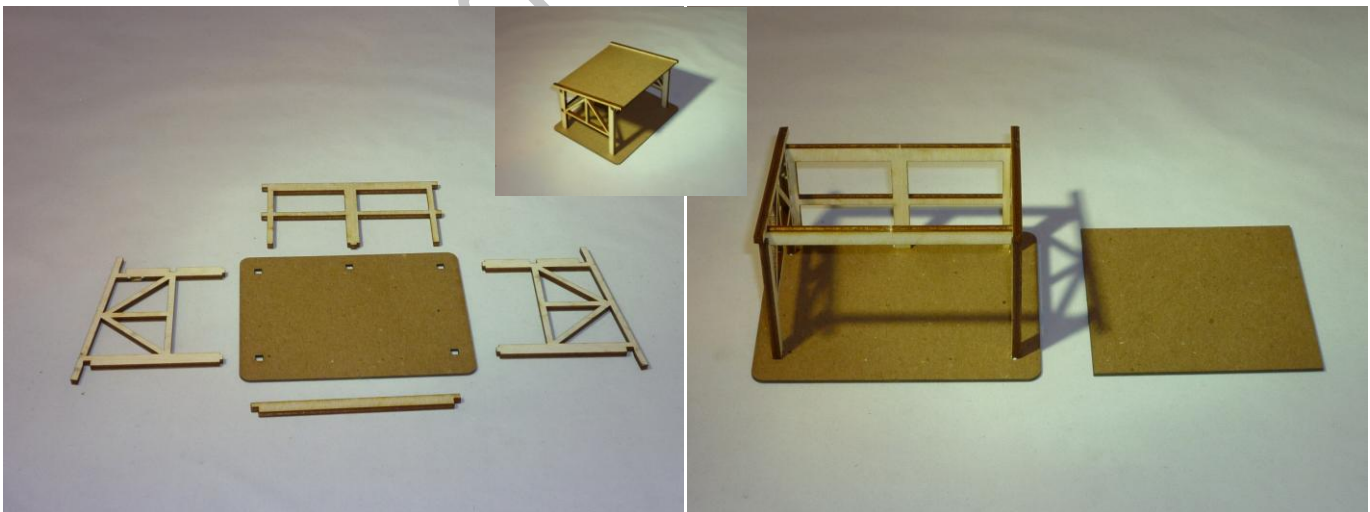

You will achieve the best results in finishing this kit when you follow the steps listed below. Always double check with the provided pictures before gluing parts together and moving on to the next step.

Please keep in mind that - in general - engraved sides of parts are considered "outside"; not engraved sides are "inside" or positioned less visible once the kit is finished.

Assembly

Shed:

Glue the timberwork together and then on the. Make sure to retain right angles. Add the roof and align on the timber framing.

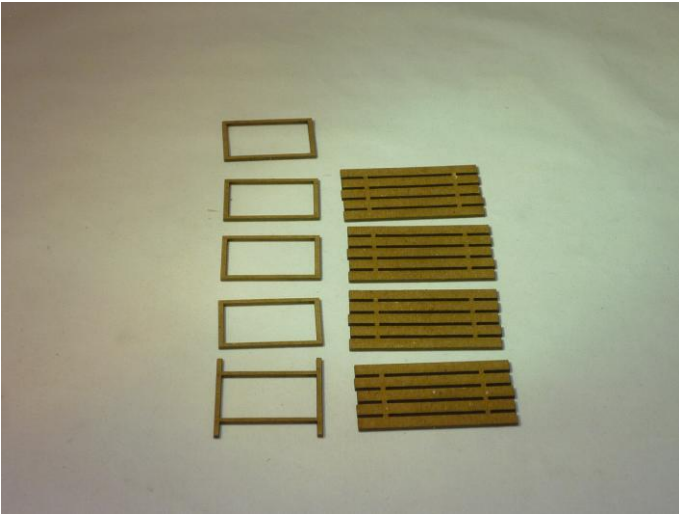

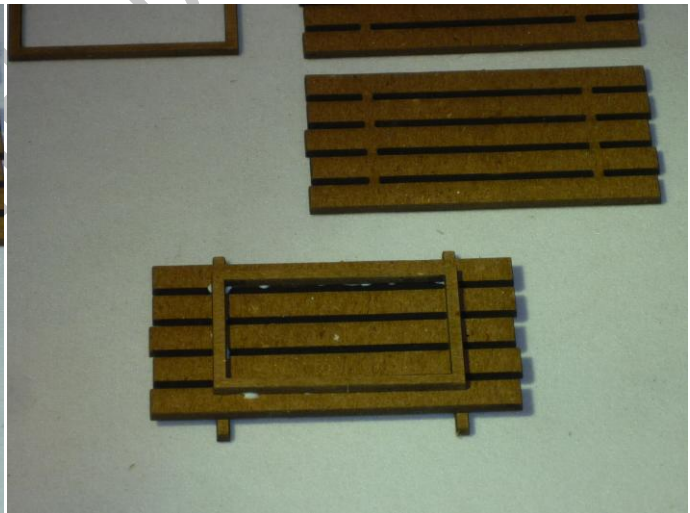

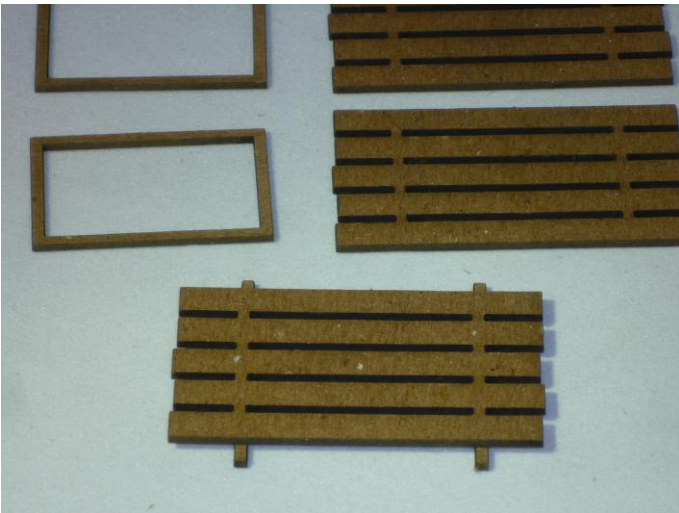

The Legend of Riverfield

Stack of Lumber

Lay out the required parts as shown below.

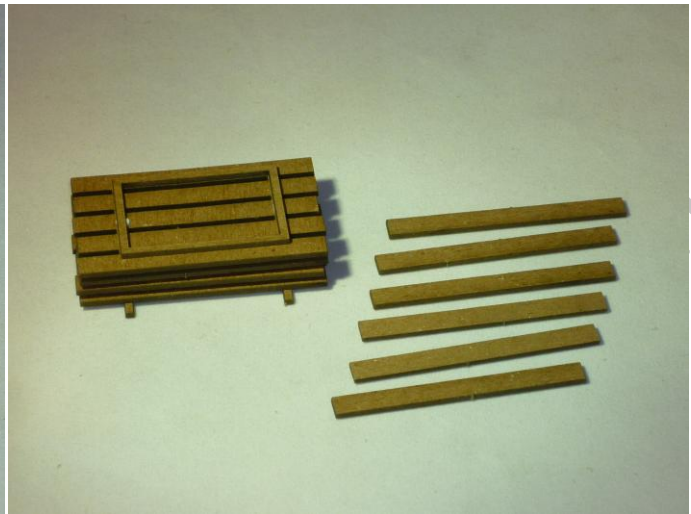

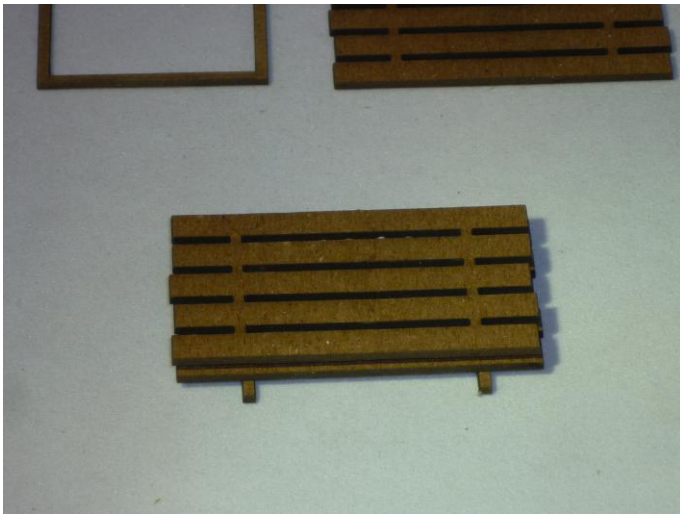

Start with the base piece and glue a part representing five boards on top. Now add one of the rectangles. Continue in this order until all parts are glued together.

The Legend of Riverfield

Now add the single boards to conceal the last rectangle and create a lumber stack to your liking.

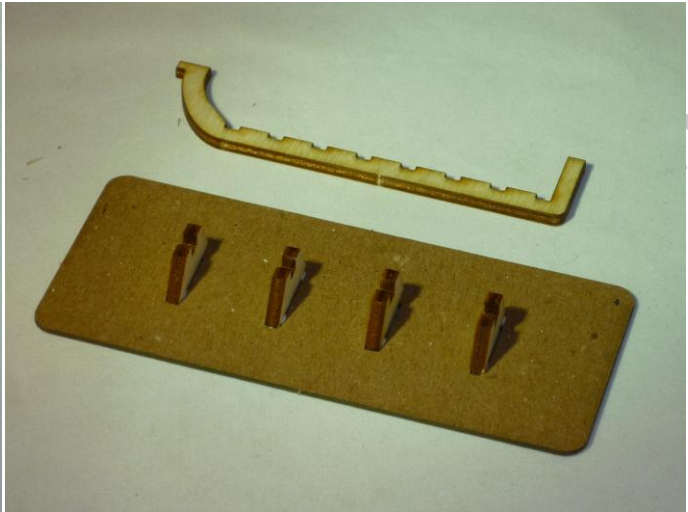

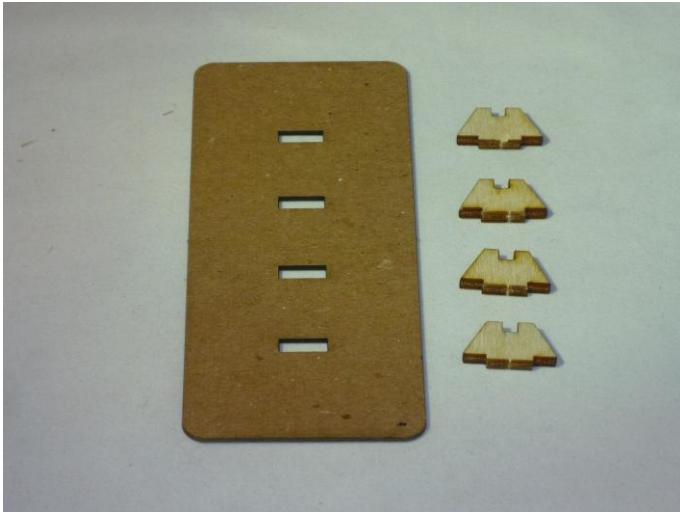

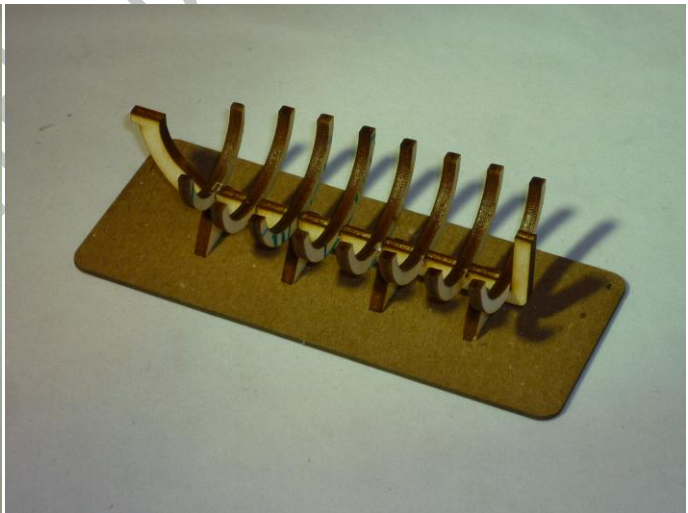

The Legend of Riverfield

Boat in Construction:

Glue the four support pieces on the base. Then add keel as shown.

Now lay out the bulkheads as shown below. Please note that the two parts closest to the bow are not as wide as the remaining six bulkheads!

Final stuff:

Add the saw and place pieces as desired.

For an even more detailed look you may want to add roof tiles. Different styles are available and sold separately at www.thingsfromthebasement.com.

If you ever experience problems or difficulties in finishing this kit don't become desperate! Just send me an email at thingsfromthebasement@gmail.com and I will help you get it done. Having designed the kit and then providing an instruction for everyone to understand is probably the hardest part of the whole project. I am ready for every kind of feedback to improve kit and instructions. I just need to know!
