## Crates

Please read the instructions before starting construction.

When opening the kit you will notice the smell of burned wood. This is because the parts are laser-cut, which literally means a very tight light beam burns through the material. You may also notice some soot at the cut edges. The amount of soot depends on the material used. You can considerably reduce it by gently wiping at least the bigger and easy to reach edges with a soft cloth or household tissue.

PVA or equivalent glue will be required to glue parts together. Give glue enough time to dry. Wipe away any excess glue immediately using a fine cloth or the tip of a toothpick. A sharp hobby knife is needed to remove parts from the sheet. Be careful and always cut away from your body. Fine sand paper may be useful to clean these areas or any tight fitting joints. Clamps, pegs and elastic bands may help during the construction of the kit. Make sure that the parts are aligned correctly before applying any of these tools.

## General pre-assembly preparations

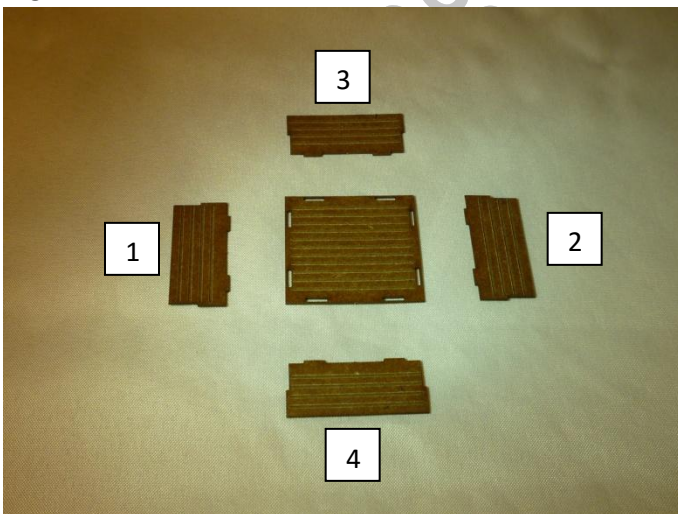

You will achieve the best results in finishing this kit when you follow the steps listed below. Always double check with the provided pictures before gluing parts together and moving on to the next step.

Please keep in mind that - in general - engraved sides of parts are considered "outside"; not engraved sides are "inside" or positioned less visible once the kit is finished.

## Assembly

**Tip:** Construction of the crates follows the same principle, no matter if the crate is square or rectangle in form, with solid or slatted sides!

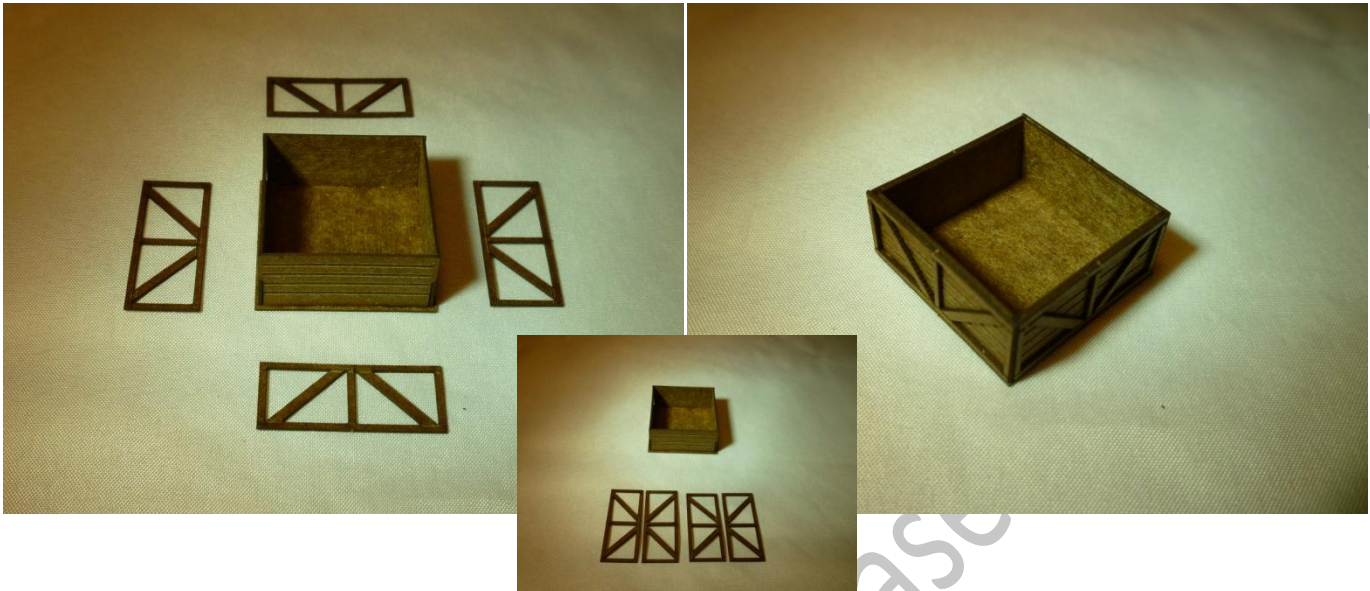

Glue four walls on base in the order specified in the picture to form the basic crate. You may choose if you prefer the engraved sides on the inside or outside.

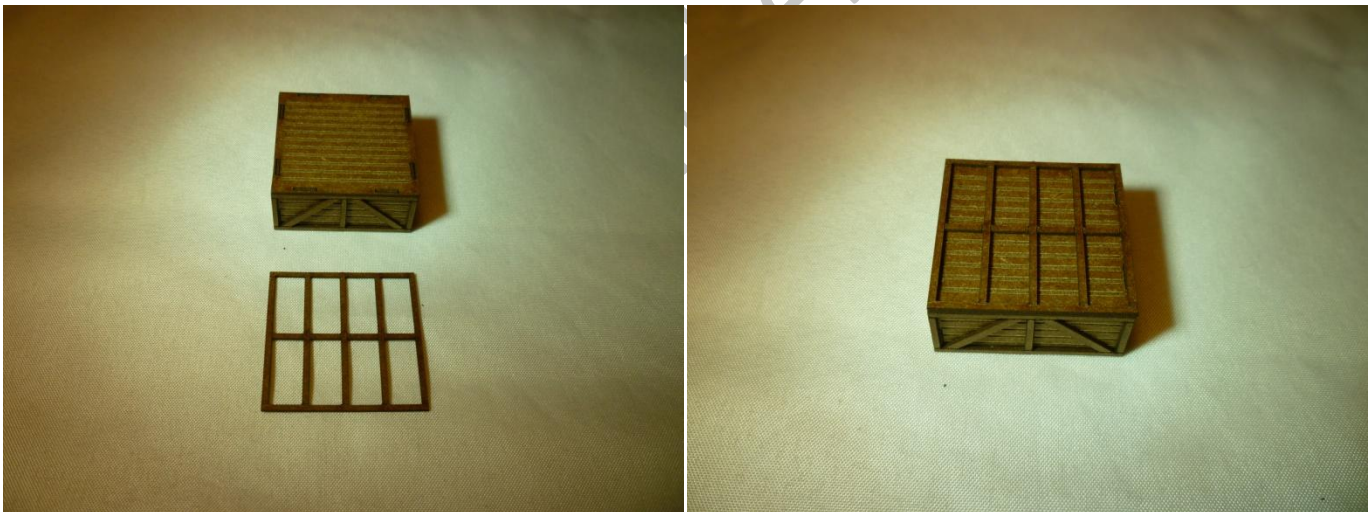

# Accessories

Now add the supporting framework. Please note that there are two shorter and two longer parts which need to be placed on opposite sides. Start with the shorter ones.

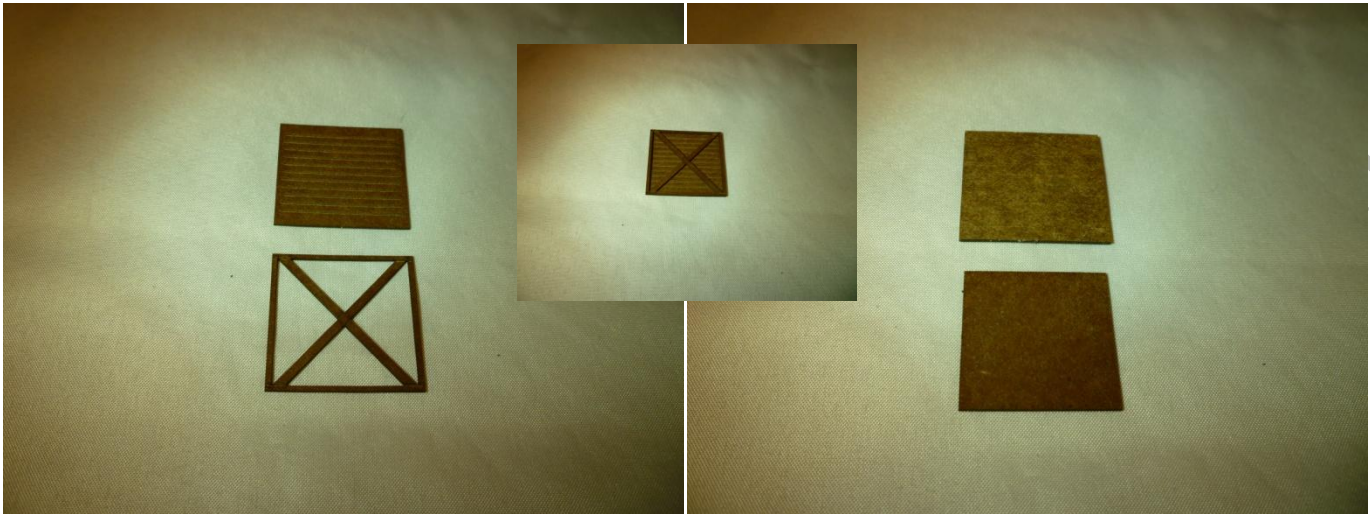

Flip crate over and add supporting framework for the bottom.

# Accessories

Add the supporting framework to the lid. Then flip around and add support, align centered.

If you ever experience problems or difficulties in finishing this kit don't become desperate! Just send me an email at [thingsfromthebasement@gmail.com](mailto:thingsfromthebasement@gmail.com) and I will help you get it done. Having designed the kit and then providing an instruction for everyone to understand is probably the hardest part of the whole project. I am ready for every kind of feedback to improve kit and instructions. I just need to know!
