

Modular Warehouse – Middle Module

Please read the instructions before starting construction.

When opening the kit you will notice the smell of burned wood. This is because the parts are laser-cut, which literally means a very tight light beam burns through the material. You may also notice some soot at the cut edges. The amount of soot depends on the material used. You can considerably reduce it by gently wiping at least the bigger and easy to reach edges with a soft cloth or household tissue.

PVA or equivalent glue will be required to glue parts together. Give glue enough time to dry. Wipe away any excess glue immediately using a fine cloth or the tip of a toothpick. A sharp hobby knife is needed to remove parts from the sheet. Be careful and always cut away from your body. Fine sand paper may be useful to clean these areas or any tight fitting joints. Clamps, pegs and elastic bands may help during the construction of the kit. Make sure that the parts are aligned correctly before applying any of these tools.

General pre-assembly preparations

You will achieve the best results in finishing this kit when you follow the steps listed below. Always double check with the provided pictures before gluing parts together and moving on to the next step.

Please keep in mind that - in general - engraved sides of parts are considered “outside”; not engraved sides are “inside” or positioned less visible once the kit is finished.

Assembly

X-frame support:

Glue the four X-frame pieces onto the base as shown. Then add the top. Finally add the long roof support as shown. Set aside and let dry thoroughly!

Industrial

Base:

Tip: Due to technical reasons the base comes in two pieces. To add additional stability it is recommended to glue construction paper or packing tape on the underside overlapping the seam!

Position the two base pieces as shown. Glue the completed X-frame support in place and let dry thoroughly!
Add the two safety guards.

Industrial

Heating/Ventilation:

Build the structure as shown and let dry thoroughly.

Industrial

Walls:

Glue roof supports in place as shown. Let dry thoroughly!

Glue the window frames and heating/ventilation openings in place on the inside as shown.

Industrial

Buildings On A Budget by
Things from the Basement, LLC
Dollhouse & Wargaming Miniatures

Glue the heating/ventilation unit wall on the wall. Then glue the whole structure on the base.

Glue the second wall on the base.

Industrial

Glue two short wall of shed in place followed by front wall. Finally add roof.

T-Beam:

Create T-beam by gluing the two pieces together as shown. Let dry thoroughly. Repeat three times.

Industrial

Roof Support:

Glue T-beams in place as shown. Let the whole structure dry.

Cap Stones:

Glue cap stones in place.

Industrial

Roof Windows:

Glue triangular shaped side walls on roof piece. Add additional support on underside.

Glue first window piece in place. Then add second piece. Repeat for second roof window.

Note: *Second piece is slightly larger to fit over the already placed first piece!*

Industrial

Now put two completed roof pieces onto roof supports. No glue required!

The warehouse is designed as a modular kit.

You can add the back piece and as many middle pieces as you want!

In addition you may use the front and back pieces as low-relief buildings:

Place them at the edge of your gaming table – the open side facing outside – and bring the battle to the table edge!

If you ever experience problems or difficulties in finishing this kit don't become desperate! Just send me an email at thingsfromthebasement@gmail.com and I will help you get it done. Having designed the kit and then providing an instruction for everyone to understand is probably the hardest part of the whole project. I am ready for every kind of feedback to improve kit and instructions. I just need to know!

Modular Warehouse

One (1) Middle Module

Industrial

Buildings On A Budget by
Things from the Basement, LLC
Dollhouse & Wargaming Miniatures

Two (2) Middle Modules

You can add as many Middle Modules as you want!

**Alternatively you can use the Front Module and the Back Module
as separate buildings placed at the table edge!**

Your individualized warehouse sign is available separately!
