Dollhouse & Wargaming Miniatures

Frostgrave – Fantasy Wargames in the Frozen City by Joseph A. McCullough and its supplements are published by Osprey Publishing. This kit is inspired by the descriptions found in these works.

The Well of Dreams and Sorrows

Please read the instructions before starting construction.

When opening the kit you will notice the smell of burned wood. This is because the parts are laser-cut, which literally means a very tight light beam burns through the material. You may also notice some soot at the cut edges. The amount of soot depends on the material used. You can considerably reduce it by gently wiping at least the bigger and easy to reach edges with a soft cloth or household tissue.

PVA or equivalent glue will be required to glue parts together. Give glue enough time to dry. Wipe away any excess glue immediately using a fine cloth or the tip of a toothpick. A sharp hobby knife is needed to remove parts from the sheet. Be careful and always cut away from your body. Fine sand paper may be useful to clean these areas or any tight fitting joints. Clamps, pegs and elastic bands may help during the construction of the kit. Make sure that the parts are aligned correctly before applying any of these tools.

General pre-assembly preparations

You will achieve the best results in finishing this kit when you follow the steps listed below. Always double check with the provided pictures before gluing parts together and moving on to the next step.

Please keep in mind that - in general - engraved sides of parts are considered “outside”; not engraved sides are “inside” or positioned less visible once the kit is finished.

Assembly

Center pillar:

Start by gluing together the four parts of the central pillar. Make sure to retain right angles.

Add upper end cap.

Dollhouse & Wargaming Miniatures

Now add ring element.

Glue two faces back to back. Insert piece centered into ring element.

Tip: If you don't like the design, just glue the two pieces face to face!
Now you can create your own design freehand or using decals.

Finally glue water spout in place. Set aside and let dry.

Basin:

Glue together the four side walls of the basin.

Add the upper rim. Set aside and let dry.

Well:

Take the central pillar and slide it on top of the smallest base piece. Then add the middle piece and the big base.

Add the basin to finish the well.

If you ever experience problems or difficulties in finishing this kit don't become desperate! Just send me an email at thingsfromthebasement@gmail.com and I will help you get it done. Having designed the kit and then providing an instruction for everyone to understand is probably the hardest part of the whole project. I am ready for every kind of feedback to improve kit and instructions. I just need to know!
